

NomoLine™ with Masimo Devices

No-moisture sampling lines for intubated and non-intubated patients in low- and high-humidity applications

NomoLine LH Adult
Nasal Cannula

NomoLine HH Infant
Airway Adapter Set

Advanced technology enables cost-effective, hassle-free sidestream capnography and gas monitoring

- > Available in both low-humidity (LH) and high-humidity (HH) configurations for use in a variety of clinical scenarios
- > Patented polymer allows water in the sampling line to evaporate into the surrounding air while leaving oxygen, carbon dioxide, and anaesthetic gas measurements unaffected, eliminating the need for a water trap and issues related to their handling
- > Enables extended monitoring time in high-humidity applications to reduce disposable costs
- > Designed for low sampling flow applications, with functionality in any orientation, supporting use on patients with low tidal volumes and high breath rates, from infants to adults

Using NomoLine with Root®

Root capabilities expand with the ISA™ family of modules to include real-time capnography and gas measurements

The NomoLine Airway Adapter Set connects to the ISA module

The ISA module easily mounts to the back of the Root monitor and connects via the Masimo Open Connect® (MOC-9®) ports
